girl BAND

Girl Behavior And NeuroDevelopment

**Researchers at
Stanford University
are studying brain
development in relation to
behavior, cognition, and
mood in **girls** with
*developmental disabilities***

**Currently recruiting girls ages 6-14 years with
developmental disabilities**

For more information or to participate contact:

 **(650)724-2951**

 **GirlBandStudy@stanford.edu**

 **<http://med.stanford.edu/girlband>**

Participation Involves:

- Comprehensive cognitive and behavioral evaluation
- MRI and NIRS Scan (safe, non-invasive, no x-rays/radiation)

Potential Benefits:

- Discussion and written report of results from evaluation
- Access to ongoing updates about outcomes of the study

You will receive a \$100 honorarium for participation

The project is designed to improve our understanding of brain and behavioral growth in girls during a critical time in their development. Information gained from this research will improve our understanding of learning, behavioral and emotional development in girls, ultimately facilitating the development of more specific and effective intervention services/therapies in the future.
